

1. **Initial Prompt** – “Create a one-page product landing page for a fictional product called 'EmberSync', a smart coffee mug that keeps drinks perfectly heated. Include a navigation bar. The main sections should be: a Hero section with a catchy product description, a Features section detailing what it does, a Pricing section with three tiers (Basic, Pro, Premium), and a final Call-to-Action (CTA) section to 'Pre-order now'. Use a modern, sleek design with a warm color palette of coffee brown, cream, and soft orange”
2. **Refinement Prompts (at least 2 more)** – “Make all the 'Pre-order' buttons throughout the page have a smooth hover effect where they change color and scale up slightly. Ensure the entire page, especially the 3-column features and pricing cards, collapses into a single column when viewed on a mobile device so it is fully responsive.”
3. **Screenshots of Outputs and Website link** - <https://emerald-portfolio--pbaldonado.replit.app/embersync/>

Designed for the perfect sip.

Every detail of EmberSync was engineered to preserve the nuanced flavors of your favorite roast, from the first pour to the last drop.

Precision Temperature Control

Set your exact preferred drinking temperature down to the degree. EmberSync holds it there for up to 3 hours.

Seamless App Sync

Control your mug from your phone. Create presets for different beverages: coffee, green tea, or hot cocoa.

All-Day Battery Life

The included charging coaster keeps your mug powered indefinitely while at your desk. Or enjoy 3 hours of off-coaster warmth.

Premium Matte Ceramic

Crafted from aerospace-grade stainless steel with a scratch-resistant ceramic coating that feels luxurious to hold.

Made with Replit

Advanced Technology

Silent, even heating.

Our proprietary thermal array wraps the inner wall, heating your beverage gently from all sides rather than scorching the bottom. This preserves the delicate tasting notes of premium coffee beans.

- Dual-zone thermal sensors
- Auto-sleep when empty
- Liquid detection technology

Made with Replit

Smart Companion

Your mug, your rules.

The EmberSync app connects seamlessly via Bluetooth. Track your caffeine intake, customize the LED color, and save presets for your favorite drinks.

It even learns your habits, automatically heating to your preferred temperature around your usual morning wake-up time.

FeaturesPricingPre-order

Loved by early backers.

Thousands of people have already upgraded their morning ritual. Here's what a few of them had to say.

★★★★★

"I never realized how often I was drinking lukewarm coffee until EmberSync. Every sip from first to last is exactly 135°F. It's genuinely changed my mornings."

Sarah Mitchell
Coffee Enthusiast, Portland OR

★★★★★

"I work from home and used to reheat my cup four times a day. Now I just set it and forget it. The app integration is seamless and the build quality feels premium."

James Okafor
Software Engineer, Austin TX

★★★★★

"As someone who drinks green tea at a very specific 170°F, I've never found a product that holds that temperature this reliably. The matte finish is gorgeous too."

Priya Anand
Product Designer, New York NY

1. Final Reflection:

- **What worked well?** The AI was exceptionally effective at handling the structural "heavy lifting" of the website, such as generating a responsive navigation bar and complex CSS Grid layouts for the product features and pricing cards. It maintained a consistent color palette and modern aesthetic based on my initial descriptions, which saved a significant amount of time that would otherwise have been spent on repetitive styling tasks. Furthermore, the iterative prompting process allowed for rapid prototyping, where I could see visual changes in real-time and quickly pivot between different design choices without having to manually code every element from scratch.
- **What needed manual fixing?** Honestly, I did not find it necessary to perform any manual fixing of the code or visual elements for this project. Because the Replit AI was able to interpret my refinement prompts so accurately, any adjustments I wanted such as changing button colors, updating text, or fixing layout spacing were handled entirely through further prompting. I relied completely on the AI's ability to revise the source code based on my feedback, which allowed me to achieve a polished, final result without having to dive into the editor to make manual corrections.
- **What did you learn about prompting?** This activity taught me that the quality of the AI's output is directly tied to the specificity and technical accuracy of the prompt, as using industry terms like "Glassmorphism" or "4-column grid" yielded much more precise results. I learned that an iterative approach starting with a basic skeleton and adding layers of complexity through follow-up prompts is far more effective than trying to generate a complex website in a single step. Ultimately, I realized that with clear communication and specific instructions, it is possible to build a functional, professional-looking website using AI as the primary development tool.
